

Project Profile

BODINE ALUMINUM INC

Eliminating roof leaks for Bodine Aluminum, Inc.

Problem:

The existing cold tar roof over the main office was deteriorating and leaking, creating distractions, and potentially placing employees and equipment at risk.

Solution:

Ben Fashimpaur with D. C. Taylor Co. investigated the roof. He developed a comprehensive proposal to retrofit the existing roof utilizing a superior PVC-based roof membrane. Not only did the new roof system eliminate leaks, it also added tremendous solar reflectivity to the roof. In addition, Ben determined the existing substrates were dry and sound despite the general deterioration of the existing roof system, saving the client additional money on this project.

Results:

The use of a white roofing system will reduce future energy consumption and costs while promoting longer roof life. The installation was executed with zero safety incidents while maintaining an aesthetic appearance of the building and grounds.

Bodine Aluminum, Inc.
Troy, Missouri

Bodine Aluminum is committed to producing premium quality, defective-free, machined aluminum castings. Bodine Aluminum needed a roofing contractor they could trust to complete this project.
